

RICHARD OKAFOR

Full-Stack Software Developer

Location: Awka, Nigeria Email: rekahdo.dev@gmail.com GitHub: github.com/Rekahdo Portfolio: rekahdo.dev

TECHNICAL SKILLS

Frontend

React, TypeScript, JavaScript (ES6+), Tailwind CSS, HTML5, CSS Modules

Backend

Java, Spring Boot, Microservices, REST APIs, Node.js, Express

Database & ORM

MySQL, JDBC, Sequelize, SQL Schema Design

DevOps & Tools

Docker, Docker Compose, Git, GitHub, Vite, Vitest, IntelliJ, VS Code

CORE FOCUS

- Erasable Syntax TS
- Virtual Threads
- 60-30-10 Design
- Clean Architecture
- CI/CD Workflows

EDUCATION

Diploma in Software Engineering

NIIT

Front-End Development

TS Academy (Phoenix 2026)

CERTIFICATION

Certified Front-End Developer

TS Academy • July 2026

Versatile Full-Stack Software Developer specializing in resilient Java/Spring Boot microservices and modular React/TypeScript web applications. Experienced in Docker containerization, test-driven development, and scalable architecture design.

FEATURED PROJECTS

ComeShop — Full-Stack E-Commerce

Aug 2026

- Built an end-to-end e-commerce application using React, Node.js, and Sequelize with MySQL.
- Implemented unit and integration test suites using Vitest and React Testing Library.
- Designed responsive product catalog interfaces styled with Tailwind CSS.

SolStat — Planetary Data App

Jun 2026

- Collaborated as core frontend developer for TS Academy capstone project.
- Integrated form validations using Yup and crafted custom responsive layouts with React & Vite.
- Maintained strict Git branch management and pull request workflows.

Library Management System — Java Backend

May 2026

- Developed a console-based database application utilizing Java, JDBC, and MySQL.
- Configured complex relational database schemas, transactions, and optimized SQL queries.

ENGINEERING PRACTICES

- Git Branching & Security:** Proficient in Git feature-branch workflows, branch protection rules, pull request reviews, and remote branch synchronization.
- Environment Management:** Containerizing full-stack web applications and MySQL databases using Docker and Docker Compose.
- Modern TypeScript:** Utilizing strictly erasable TypeScript syntax (``erasableSyntaxOnly`` compliance) and replacing runtime enums with type-safe ``as const`` objects.
